

Endangered Species in Norway

© Roger Breindhaugen / NINA

Endangered species in Norway

- In Norway, over 2,700 species are on the Red List.
- Main reasons:
- Habitat loss
- Pollution
- Climate change
- Human activity

Arctic Fox

- The Arctic fox lives in cold mountain areas.
- Climate change and lack of food threaten it.
- Norway helps by breeding foxes and protecting habitats.

Wolves in Norway

- Wolves are critically endangered in Norway.
- They were hunted for many years.
- Today they are protected, but hunting with licenses is controversial.

Other Threatened Animals

- Lynx
- Wolverines
- Brown bears
- Puffins

- These animals are important for balance in nature.

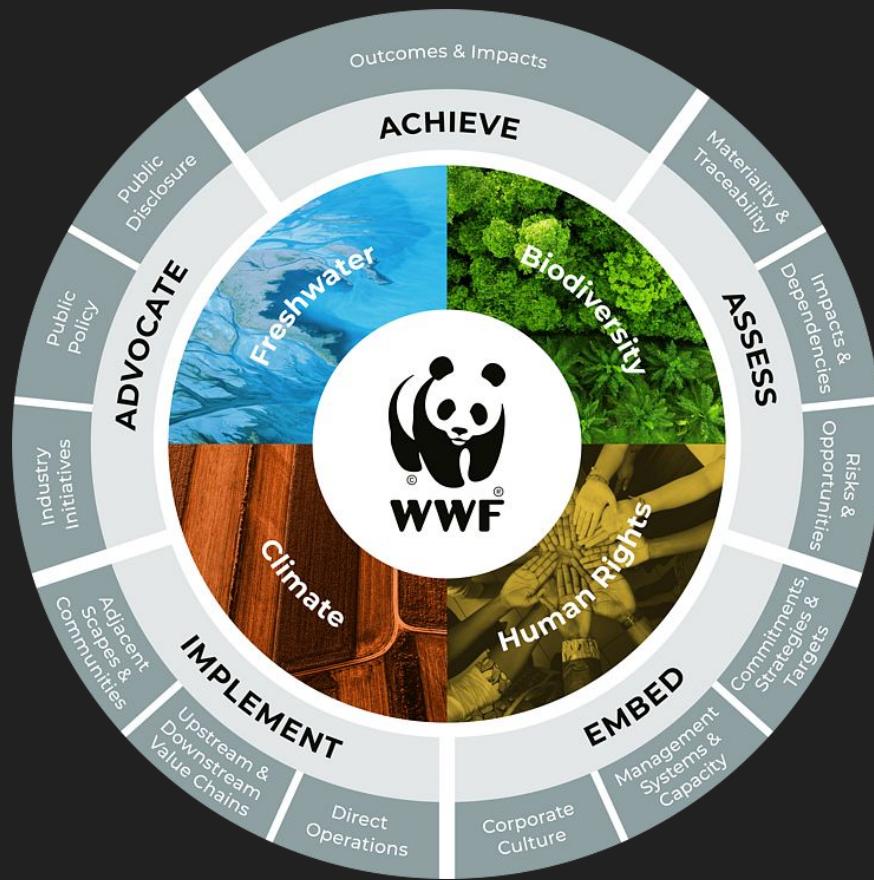

Why This Matters

- All species are connected.
- Nature gives us clean air, water, and food.

What Norway and WWF Are Doing

- Protected areas
- Wildlife laws
- Breeding programs
- Education

How You Can Help

- Respect nature
- Do not litter
- Learn and share knowledge
- Support environmental groups
